

WAHL PEN

THE WAHL WRITING EQUIPMENT LINE —AND THE WAHL DEALER

We ne works progresses. Man and the products of his handhrowt develop and Improve. Each be the ultimate development in its line, and something new takes its place. Thus it is that ramofacturers who would keep pace with the public deare must be constantly on the alter to improve their products, to add new produces from time to time, and to withdraw those which have couldred their aucfilters.

Progress has always been the keynote of Wahl success. In very beginning in the writing equipment field was in the development of a product so new, and preented to the public in so novel a way, that it immediately opened up tremendous new sources of profit for delaters in all parts of the world. To maintain that progressiveness in development has been the constant is mol The Wahl Company.

Yet changes develop slowly. From an idea to the finished product is usually a tedious process of many months' duration—a long period of experiment and test. And most important of all, the effect on dealers must be carefully considered, and plans made to assure the protection of their investment in Wahl Products.

It is gratifying to note at this time the remarkable assecss of the new Parfectel Berwinhur which was produced a little more than a year ago. It is gratifying to note the remendous strikes and by the precions metal pen, a new produce produced and pionered by Wahl. Fielding in fare matches as a gift ison because of its high jewelty value, it is now coming calculated the strike product of the strike strike and the strike strike strike strike and the strike and the strike strike strike strike strike and and the strike strike strike strike strike strike and the strike strike strike strike strike strike without the entre of bulkings.

This year we have presented another new departure in mechanical pencil making—a pencil with a thick writing lead. With our usual liberal advertising backing, it is rapidly winning favor with the public, and providing another new narket for Wahl delaces. This new thickness of lead (0.07^o diameter in comparison with the 1.04° dumeter of the standard thin lead gives the Eventuar line a complete range of lead size for every writing need. The standard thin lead is for controlsones writing, the thick lead is a combination writing, nantfolding, and marking lead, and the checking lead is for heavy marking use.

Noteworthy among other additions to the Wahl line during the year have been the oversize, rubber barrel pencils, made for both thin and thick writing leads. The immediate demand for these pencils exceeded every expectation, to the extent that for a number of months our factory was severely taxed to fill orders.

With all the steension given to the development of new and improved produces, The Wahi Compary has realized due in the dealer's interest the most pressing need is for simplification, and insportant steps are being taken in this direction. These changes must come slowly, of course, in order that the dealer's invesament may be completely protocated, but when the complete Wahi lines, and therefy serving the many benefits that accrea, will be a far simpler one for the average dealer.

*** *** ***

Evers product add by The Wahl Company carties the Wahl Guranny, as sweeping as to be virraully unconditional, yet so simple that there is no coprotunity for mannederstanding or ministrepretation. It is not a sensationally worlded statement, tending to confuse the public and mate difficuities for the dealer in assuring the sufficiency appresent to protect the dealer in assuring the sufficiency appression and the sustainable world with the statisticatory performance of every piece of Wahl metchandities cold. The best assurance to you of its effectiveness is the sincere manner in which it has been carried out over a period of years. Beedy, the Wahl Gucanny is this:

We stand squarely behind the Wahl dealer in every sale of Wahl merchandise. We will make good with the dealer in any way that he finds it necessary to make good with his customers.

THE WAHL COMPANY

WHERE EVERSHARP PENCILS AND WAHL PENS ARE MADE

Pictures and words can but poorly describe the Wahl factory, or the skill and care of manufacture that go into all Wahl Products. The large, daylight factory pictured above is far more than brick and stone and concrete---ti is the home of an efficient, painstaking and highly-trained organization that takes pure gold and crude rubber and many other raw materials, and fashions them into the world's finest writing instruments, Eversharp and Wahl Pen.

The Wahl factory is a modern, fireproof building, five stories high, with seven acres of floor space. It is a building designed expressly to house this great pen and pencil making organization, and equipped for that purpose alone. The first four floors are occupied by the manufacturing departments, and the top floor by the executive, sales and general offices.

The equipment throughout is the finest that human ingenuity has devised for the making of quality writing instruments. Many of the intricate machines in regular operation here have been planned and built by our own engineering staff, to provide equipment that would make better products, or make them more economically.

Practically every part of every Wahl Product is made here from raw material. Wahl makes its own precious metal tubing, its own rubber tubing, its own nibs, and the many other parts which make up a pen or pencil. Nothing is left to the whim of outside manufacturers, and thus The Wahl Company is able to guarantee unconditionally every piece of material that goes into a Wahl Pen or an Eversharp Pencil.

All Red Top Eversharp Leads, too, are made here from the best raw materials that can be procured in the United States and in other parts of the world. They are made accurately to fit Eversharp Pencils, of uniform strength, grade and diameter, in one of the finest lead factories to be found anywhere.

So many figures might be cited to show the capabilities and magnitude of this organization that they would only confuse. You will be interested to know, however, that the factory pictured on the preceding page has a daily capacity of 50,000 pencils, 8,000 pens, and 1,300,000 sticks of lead.

We might take you, with a word picture, through the great Wahl factory. We might show you how pure gold is alloyed to give it wearing quality, and the intricate processes by which it is transformed into smooth-writing nibs, and into the precious metal tubing which later becomes pen and pencil barrels. We might show you the bales of crude rubber stock and the many processes by which this rubber is purified and ultimately made into the tubing which gives the great strength and beauty to Wahl rubber pens.

We might tell of these and dozens of other interesting and novel operations; but after all, the things that go into a pencil or pen and the technical processes of manufacture are not so important as the art with which they are manufactured to give pleasing effects in design, perfect results in use, and lasting value in wear.

This precise and experienced manufacture has been the especial province of The Wahl Company through all the years of its being. A perfect understanding of materials, a genius for invention in its particular field, skilled men and special equipment, all are joined under the Wahl ideal of finest quality, to produce in Eversharp and Wahl Pen companion writing instruments without a superior anywhere or in any respect.

The eye is appreciative of their outward beauty, but to the creative mind, eased of concern with the manual effort, and to the responsive hand, equipped with a fluent and fatigueless tool, must be left the final verdict on the gootheses of these writing servants. Wahl dealers know what this verdict is—know it by the multitude of expressions volumteered from the millions of men and women who have preferred Eversharps and Wahl Pens above all others.

SUPERIOR FEATURES OF PERFECTED EVERSHARP PENCILS

1

THE RIFLED TIP

This patented feature, used only in Eversharp, first made a good mechanical pencil possible. Tiny relief spaces between the lead-gripping text bur prevent clogging or junning. Still the lead is held firmly at the point; no slipping; no wabbling. Identify the genuine Eversharp by the groover cut in the lead as it passes through the tip.

2

LOADS IN AN INSTANT

Above and at the right is shown the trigger which releases plunger when lead is used up. This automatic release makes Eversharp the fastest loading pencil. One pull—insert lead one push—a turn. That's all.

3

EXTRA LEADS ACCESSIBLE IMMEDIATELY

The side-opening lead magazine enables the user to draw a new lead almost instantly. The amount of reserve lead can always be seen. This feature provides extra converience and speed of operation. Because of the length of barrel necessary for this feature, it is found only in the long model pencils.

4

AUTOMATIC LEAD INDEX

To know the length of lead in Eversharp just pull the cap straight out. The distance between A and B, as shown in the illustration, equals the length of lead remaining in feed chamber ready for use.

5

SAFETY POCKET CLIP

The pocket clip on Eversharp is made stronger by a reinforced nb construction which adds to its appearance. The large point of contact eliminates wear on the clothing. Even the clip is broken accidentally, a new one can be inserted in a few moments.

REPLACEABLE ERASER

The construction of Eversharp permits the eraser to be replaced by a new one. It cannot come out in use, yet it can be changed in a moment.

ALL PARTS INTERCHANGEABLE

Any standard Eversharp can be completely taken apart by unscrewing the tip and pulling out the mechanism. All parts are interchangeable and replaceable. Anyone can replace, in a few seconds, any part that becomes broken or worn through accident or abuse.

Complete information regarding special emblem caps for other organizations, schools, or with trade-marks, furnished upon request.

RED TOP EVERSHARP THIN LEADS

Red Top Eversharp Leads are made of the finest grades of domestic and imported graphetes, clays and waxes. They are made in our own complete plant-strong, smooth-writing, and uniform year after year hosh as to grade and color.

The diameter of Red Top Eversharp Leads is accurately maintained to fit the patented tilled tips of Eversharp pencils. For parfect writing setisfaction, only Eversharp Leads should be used.

Made in the following grades and colors (standard Eversharp thin diameter):

Black (Seven Grides) (Seven Grides) Black (Seven Grides) B-Soft HB-Medium Soft F-Firm H-Medium Hard 2H-Hard 4H-Very Hard

Enersharp Loads are packed in Red Top containers as follows:

12 sticks of lead of one grade or color in metal tube. Black leads in coloring tuber, colored leads in round tubes—tubes painted same color as lead they contain. (Illustrated at top of toge.)

12 metal tubes of one grade or color in cardboard box; one gross stacks of lead in all. (Illustrated at top of page).

144 sticks of leads of one grade or color in sliding cardboard box, for office use. (Elustrated at left.)

EVERSHARP ERASERS

Every Eversharp envire can easily be replaced with a new one when worn out. They are made of firm, smooth, red rubber, and have excellent ensuing qualities.

Below are shown the six sizes and styles of Everyburp erasers, and a brief explanation to indicate with which Everyburp pencils they are used. When ordering entra emsets be sure to specify the styles wanted.

MIN-Small unprounted eraser for use only with Miniature and Midget Miniature Eversburps shown on page 13.

REG—Mounted eraser for use with all regular diameter processus-metal, and rubber-barrel Eversharps, and also for use with the old-model, enameled-barrel pencils having a double magazine.

BM-Mounted enser for use with bakelite-barrel Eversharps having the enser shell open at both ends. Also used with the new enameled, aluminum-barrel penells shown on page 17.

BP-Unmounted craser for use with the old-model, bakelitebarrel Evensharps having craser shell closed at the lower end.

SJ-Shart, mounted Jumbo eraser for use with \$3.00 oversite Eversharps having cap to conceal eraser, as illustrated on pages 16, 18, and 19

LJ-Long, mounted Jumbo eraser for use with \$1.00 oversee Eversharps without eraser cap, as illustrated on pages 16 and 18.

RED TOP EVERSHARP THICK WRITING LEADS

A new departure in lead making is marked by the addition of these modium-thick writing leads for use in Eversharp pencils. They are made aspecially for those who like to write with a heavy line, and who prefer a lead that can be used for checking and manifolding, as well as for continuous writing purposes. They are 0.03 of an inch in diameter, as compared with the .046 of an inch in dismeter of the standard thin leads.

Only the finest materials are used in the manufacture of these leads. They are carefully calibrated to a constant diameter, and are of the sime high quality in strength, smoothness, and uniformity of grade and color as the regular line of thin diameter Eversharp leads. Made in the following grades and colors:

BLACK (Graphite) Medium Soft

COLORS (Medium Grade only) Red Blue Green Purple Copying (Indelable)

Packed eight sticks of one grade or color in Red Top round, wooden tubes. For easy identification, the labels are printed in a color to correspond with the color of the leads in the tube. (See illustration above.) Twelve tubes of one grade or color packed in folding cardboard hoz.

EVERSHARP CHECKING LEADS

Eversharp Checking Lends are made for use in the Eversharp Checking and "Executive" pencils illustrated on page 20. These leads are .120 of an inch in diameter, and are especially adapted to heavy checking work, or marking on rough surfaces. Eversharp Checking Leads are furnished in two grades: No. 1 (medium soft), and No. 2 (artra soft). The No. 2 grade writes well on glass, chius, and other smooth or glazed surfaces. Both grades are made in the following colors:

Yellow Black

Purple copying (indelfible) checking leads, which write black and copy purple, can be furnished in the No. 1 grade (medium soft) only. Eversharp Checking Leads are nacked six of one grade or color in sliding cardboard box as shown above, One box of checking leads included free with each Checking or "Bisecotive" pencil. Black checking leads are always furnished unless otherwise ordered.

Tel, Werd

Casta Fuzzatear Leza Astornestre No. 9-Smill size associator. Contains con denen tubes end of grades B, HB, and J, State Borenharp leads, and J, State Borenharp red, Forenharp blag, and Eversharp prome leads Contains two-down house of Eversharp renews: no checking leads threads and the same trans. State of and 115/371/je35 inches.

EVERSHARP LEAD COUNTER DISPLAY ASSORTMENTS

Increased sales of Eversharp Leads follow wherever they are displayed in these handsome counter display stands. The stands are a constant reminder to your customers, and serve as an invitation to them to reload their Eversharps. Every store can profit by the use of one or more of these busy silent salesmen placed in prominent locations.

Eversharp Lead counter display stands are very sub-

stantially built of metal with a mahogany-finished wood base, beautifully colored, and will remain attractive for years. They can be refilled easily when the assortment of leads needs replensing.

These lead stands are made in two sizes, and are furnished only with standard assortments of Eversharp Leads as listed opposite each stand.

WAHL PEN

THE WAHL PEN OF PRECIOUS METAL

A New Landmark in Fountain Pen Progress

A loos the highway of fountain pen progress are but a few landmarks denoting basic developments in design that have guided the manufacturing effort of the future. The self-filling pen was one of these.

The self-filing pen, however, required a soft rubber ink sac which occupied a large part of the hard rubber barrel, and thus left luttle space for ink. Because the tradition of long years demanded that the barrel be made of hard rubber, the next step was simply to increase the size of the pen to get a larger space for the ink sac.

> Thus resulted the bulky pens that have been the vogue for several years. But this method of getting geneter in the capacity was a makeshift, as Wahl craftsmen realmed. Why, they asked themselves, need the barrel be built of rubber at all, since the ink is contained in a oft rubber sac? Why not build the barrel of a thin strong material which would give greater ink capacity, plus added strength, without the disadvantage of cumbersome size and weight?

> The answers to these questions resulted in the development of the Wahl Precions Meral Person pen which we believe is destined to set up a new landmark on the highway of fountain pen progress. Gold and silver were the materials chosen to carry out this revolutionary conception of a fountain pen. New as these metals were to the art of fountain pen manufacture, they had been for many centures the only accepted materials for the making of other high class articles of personal equipment. Since the beginning of civiliation, they have been the only metals discovered (except for a few of prohibitive cost) that in their native state will maintain their outward beatyra is long as any part of the material lasts.

> So it was but natural that they were selected as the basic materials for The New Wall Pen. This pen is so strong as to be practically unbreakable; it is slender and graceful, yet its ink capacity is greater than that of rubber pens twice its size; it is light in weight, perfectly balanced, unfaltering in writing performance, and has the rich beauty which can come only from fine jewelry designs engraved in gold or silver.

> Some of the features are shown in the sectional view at the left. Note the thin walls, the rolled metal threads which cannot be broken, the large ink sac, the compact filling mechanism. Then turn to the pages which follow and note the beautiful jewelry designs and the graceful proportions of these pens.

> Try a Wahl Pen from your stock; observe its fine balance, its light weight, and its certain performance. Compare its ink capacity, if you care to, with the largest pen in your case, and prove that it holds more ink than any other.

> Wahl builds rubber pens, too, for those people who are not yet converted to this modern pen. These rubber pens are the finest that can be made, and second only to the pen of the future—the Wahl Precious Metal Pen.

WAHL PEN

THE WAHL RUBBER PEN

FOR the thousands of buyers who are not converted to the new Precious Metal Pens, Wahl makes the finest line of rubber fountain pens that experienced craftsmen and perfected equipment can produce. These pens have all the superior operating features found in the Precious Metal Pens—the comb feed, which holds ink as a comb holds water; the perfected filling mechanism, which fills the ink sae full; the same full-size, smooth writing nibs.

There is a difference, too, between the Wahl Pen and the ordinary rubber pen. All hard rubber parts are made in our own plant, step by step, from crude rubber as it comes to us from the tropics. Thus we are able to watch it carefully through every process, to be certain of its strength, and to insure uniformity of color and richness of finish. These are qualities which depend far more on the compounding of the rubber itself than on any effort which may be expended in the final finishing process.

Wahl rubber pens are now made in four different external finishes—jet black in two designs of engineturning, orange-red, and red-and-black mottled. They are made in all standard sizes, and with any style of nib you may choose from our varied assortment.

The complete line is illustrated and described in the pages immediately following.

THE WAHL SIGNATURE PEN

A pen fit to affix your signature to the occasional letter or to the most important document—a pen for use now and then or for writing steadily hour after hour—a pen for writing steadily hour ofter hour-a pen unfailing in its response to every movement of your hand. The mb is of a special design, developed after careful study of the peter-ences of bayers of high-grade fountain pens, and we believe it will please a greater number of pen users than any other mb.

FITTING A PEN TO THE USER'S HAND

 \mathcal{T}_{a} are most important factor in the sale of a fountain pen is giving the customer on this one feature at the time of sale, at least one-half of all so-called fountain pen troubles could be eliminated. Frequently a customer will complain of a scatchy nb, or of one in which the ink flow is too slow or too fast, when the real difficulty is that the pen is not suited to that person's style of writing.

On more than any other one thing, fountain pen satisfaction depends upon the selection of the proper nib. A purchaser should be offered a fine, medium, broad, manifold, posting, oblique, stub, half stub, or Signature nib, with an even ink flow, according to the writing style of the individual.

Every Wahl dealer and his salespeople should familiarize themselves with the Wahl Pen nib styles shown on this and the following page. The use of this knowledge at the time of the sale will make satisfied customers and create confidence in the store and in the pen purchased. If the exact nib wanted is not in your store, do not substitute, but write to us, sending if possible, a steel pen that just suits the user, and we will match it with a Wahl Pen nib.

WAHL PEN NIBS

Or rites two pages are shown the many styles and sizes of Wahl 14K solid gold nuls. Among them is a nib to suit reactly any style of handwriting. Wahl Pen nubs are generous in size, length, and gold content, and are havily tipped with the highest grade of smortidium—the hardest metal known. Each mb is pointed, ground, and smoothed by master craftsmen, and carefully tested by highly skilled inspectors before being passed as satisfactory for use in Wahl Pens.

It is our firm belief that these nibs are in every respect the most nearly perfect nibs that are manufactured.

Following are the uses for each of the Wahl Pen nib styles:

MINIATURE A long, medium, flexible nib; writes with a medium line. Made in size 0 only.

- Fing. Long fine points are used for light writing, where small lines are desired; generally used by women, and by many men who write with a light stroke. Also good for fine penmanship where shading is desired. Made in store 2 to 6 inclusive.
- MERGING Used for all ordinary writing purposes. This is the most popular style of nib, and is suited to a large number of men, women and children. It writes a medium line, and is sometimes used where shading is desired. Made in aises 2 to 6 inclusive.
- BROAD For use where the writer wishes a heavy line on both direct and cross strokes. Good for heavy shading. Made in sizes 2 to 6 inclusive,
- Srug Used by persons desiring a short nib that makes a heavy line on the down stroke and a light line on the up stroke. Used also by back-hand writers, and sometimes for hand lettering where bold characters are desired. Made in sizes 2 to 6 inclusave.

WAHL PEN NIBS (Continued)

- HALP-STUB Practically the same as the stub, except that the point is not so wide. Made in sizes 2 to 6 inclusive.
- Osuçur. Similar to a stud, but is bevelet off at the side of the point to unit a person who holds the barrel of the pen between the fingers, instead of between the thumb and index finger. A right-handle person uses a right oblique, and a left-hindle person uses a left oblique. When ordering specify which is wanted, as the right oblique is always sent unless otherwise specified. Made m sizes 2 to inclusive.

FALCON Very much like a fine, medium, or broad long nib, but is a trifle more flexible because of its being cut out at the sides. Made in fine, medium and broad, in sizes 4 and 6 only.

STENDORAPHER A long, fine, flexible nib, particularly adapted to making short-hand characters. Made in sizes 2 and 4 only.

BOOKREEPER A long and fairly stiff nib made of heavy stock to enable the writer to make small, clear-cut figures. Made in sizes 2 and 4 only.

- MAWHOLD This not is long and still with a medium-sized point. Good for making carbon copies, and a favorite among people who write with a heavy hand. A nit for all general writing purposes—writes on rough or cheap paper, and will stand very hard use. Made in sizes 2 to 6 inclusive.
- POSTING A short, stiff nib with a fine point, suitable for ledgermen, bookkeepers, accountants, and others who want a nib for fine figure work. Made in sizes 2 to 6 inclusive.
- BALLFOINT Sometimes called the "turn up" mb; made with a medium sized point only. It is a smooth writing pen at all angles, and writes well on rough paper. The best nib for nervous or old people. Made in size 4 only.
- Stexarous Designed for those who want a heavy, durable nib made especially for hard, cortinuous writing. Has a smooth, round point, and will suit practically every kind of handwriting. Furnished in fine, medium or broad in sizes 2, 4 and 6. When ordering Signature nibs be sure to specify whether wanted stiff of flexible.

SIMPLE CARE OF FOUNTAIN PENS INSURES PERFECT SERVICE

 ${\mathfrak T}_{\rm o}^{\rm o}$ many people, the care of a fountain pen involves only refilling with ink when necessary. But due to the action of the various inks used, and to the manner in which the pens are carried, used and misused, they occasionally get out of order.

By following a few simple points in the care of fountain pens, as explained below, every user of a Wahl Pen will be assured a perfect writing pen, free from the common faults that many have regarded as necessary evils. Wahl dealers will find this information of particular value in selling Wahl Pens, and in keeping their customers satisfied with the pens after they are sold.

RE-FILLING A WAHL PEN

Only good, clean bottels fournain gen ink, free from dust, dirt, and other foreign matter, should be used to fill a Wahl Pen. Hold pen in perpendicular position (with the point down) and raise the lever on site of burrel. Then completely submetge soll pen point and lower end of point section in ink. While in this position lower lever to its normal position, allowing point and point exciton in in submetged in ink for abult en accord is of the trablet are to them for abult encounder in the trablet are to the repair. The normal point way is and region in a several times in order to moisten theoryby the ink channel in the comb feel. Now, will holding pen with point down, wipe off surplus ink from pen and feed, and pen is ready for use.

Unless the gold per and end of point section are completely submerged in ink and left in long encouple to allow the sac to fill with ink, air bubbles will be drawn into the sac at the per will be only party filled. These air bubbles first retard the flow of rink, and afterwards, as be air rankes to the top of the ink sac, have a tendency to force out the ink, causing the pen to flood or drop ink. Every subgroum should sattry instalf that each parchaser understands the proper method of filling a Wohl Pen.

CLEANING A WAHL PEN

More peak go to repair stations on account of being divery or ologged than for any other reason. Every purchaser of a fournain peak should be tour that the statistical statistical statistical statistical times are outlined above, using cold water instead of infi. If pen is clogged, use a solution of one part dired and which from consider of the statistical reason of the statistical statistical statistical statistical dired and the statistical statistical statistical statistical dired and the statistical statistical statistical statistical expelling the water, or water and ammonia solution, near this overcling in claim water to we the stangent solution out of the pen. Then shake pen well in order to expel all the water, and the pen is ready for filling as directed above. DO NOT USE HOT WATER, as this will soften the hard rubber parts.

The inside of the cap should be cleaned frequently with a piece of soft cloth or tissue paper and the airholes in side of cap should be cleaned with an ordinary pin.

If pen is very badly clogged with dried, or poor ink, and cannot be thoroughly cleaned as above, it should be placed in the hands of a competent fountain pen repair man at a regular pen service station.

CARE OF STOCK

Do not put rubber bands around silver pens or pencils. The sulphur in the rubber will cause the silver to tamish rapidly, and within a very short time will actually eat into the silver, damaging the surface beyond repair. Pens and pencils with black rubber barrels should not be exposed to strong light or to the direct rays of the sun. They will fade, and thus their salability will be impaired. When faded, it is impossible to restore the original color and finish to these pens and pencils.

WAHL REPAIR SERVICE

Besides complete repair departments maintained at the factory and at each of our branch offices, for the benefit of all Wahl Pen and Eversharp dealers and users, Wahl service stations have been established in practically all the larger cities of the country. Expert pen and pencil repairing at the same prices as charged by us, can be obtained promptly from any of these stations. We shall be glad to send you the name of your nearest Wahl Service Station.

HOW INDIVIDUAL EVERSHARPS AND WAHL PENS ARE PACKED

All regular size Evensharps listing from \$1.03 to \$3.50 are packed one pencil in an attractive white set-up box (see illustration below), or in a white folding box of similar appearance.

The ministure and midget ministure pencels on page 13 are furnished in special white set-up haves, or in white folding bares very similar to the one shown below.

Checking and "Executive" pencils listed on page 20 are packed individually in nest brown set-up bases similar to the one illustrated at the left.

Enameled, and Bakelite-burrel pencils (page 17) are packed one dozen of one color and style (or one dozen assorted in standard assortment) on counter display card, and loose in straw-board cartons for quantity sales. Dozens cannot be broken.

The new \$1.00 oversite pencifs with exposed erasers are packed on special counter display cards in lots of one dozen of one color, or one dozen in standard assortment, and losse in straw-board cartons for quantify sales.

All precisous metal, and rubber Wahl Pens fitting at less than S600 (except miniature and Signature pens) are packed one pen in a white set-up box, as shown at the right.

Each Signature pen is packed in a special buffcolored set-up box similar to the one illustrated above

Regular site Eversharps listing at \$4.00 and up (except solid gold) are enclosed in handsome astin-andvelvet lined gift boxes, as shown at the left. The pencil illustrated is Eversharp No. 24 (page 7).

Gold-filled match thin pencils (page 13) are packed one pencil in a special gift box with velvet pad,

Solid gold Eversharps are furnished in genuine leather, satin-and-velvet lined presentation hoxes.

All precious metal Wahl Pens to retail at \$6.00 and up (except solid gold) are packed in brautiful satin-and-velvet lund gift boxes, as illustrated at the right. The Wahl Penshown is No. 323.AW (page 28).

Miniature pens are packed in the same style of gift box as at the right, but in a smaller size.

Wahl Pens of solid gold are ahipped in genuine leather presentation boxes, lined with satin and velvet.

EVERSHARP AND WAHL PEN WRITING SETS

Pos FRACTICALLY every Eversharp pencil shown in this catalog, there is a Wahl Pen shown which matches fin material and decorative design. What more welcome and complete a gift could be obtained for any occasion or what more useful and appropriate articles for personal use, than these perfect writing companion?

On this and the following page are illustrated the boxes in which Eversharp and Wahl Pen combination writing sets are packed.

Men's sets composed of a precious metal pencil and pen to retail at \$6.00 and up (except solid gold) are packed in brilliantly colored attin-and-velvet lined gift boxes as shown above. The set illustrated is Eversharp No. 14 (page 7) and Wahl Pen No. 646A (goge 27).

Men's precious-metal combination writing sets listing at less than \$6.00 are packed in gift boxes similar to the one shown above, but without the satin-lined top.

Ladies' sets composed of a precious metal pencil and pen to retail at 36.00 and up (except solid gold) are packed in daintily colored saturand-velvet lined gift boxes as shown below. The set in the illustration is Eversharp No. 235W (spage 7) and Wahl Pen No. 339AW (page 28).

Ladies' precious-metal combination writing sets listing at less than \$6.00 are packed in gift boxes similar to the one below, but without the satin-lined top.

Combination sets composed of a midget miniature Eversharp and a miniature Wahl Pen are furnished in satin-and-velvet lined gift boxes similar to the one shown below, but in a smaller size.

EVERSHARP AND WAHL PEN WRITING SETS

S ITS MADE up of pencils and pens with hard rubber barrels and gold-filled trimmings are packed in handsome French gray gift boxes as shown above. The set illustrated is Oversize Eversharp No. 752B (page 19) and Wahl Signature Pen No. 762S (page 32).

Ladies' sets of hard rubber barrel pencils and pens are packed in the same style of gift box as above, except smaller in size,

To those desiring to present a gift of unusual elegance, we suggest a solid gold Wahl writing set, consisting of a solid gold Eversharp and a solid gold Wahl Pen to match. These sets are encased in beautiful, genuine leather presentation boxes as illustrated bedow, lined with satin and velvet of a very high grade.

The ladies' solid gold set shown below is Eversharp No. 985W (page 6) and Wahl Pen No. 3298BW (page 26). Men's solid gold sets are packed in genuine leather, satur-and-velvet lined presentation boxes the same as the one shown here, but in a larger size.

For a group gift it would be difficult to find a more unique or more highly prized article than a Wahl writing set in either yellow or green solid gold. A good selection is offered on pages 6 and 26 of this catalog.
